## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claim 3, 6-10, 12 and 14-21 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 4, 5, 11, 13 and 22-25 rejected under 35 U.S.C. 102(e) as being anticipated by Collins, III et al. (6,547,249).

Regarding Claims 1 and 13, Collins et al. disclose monolithic series/parallel LED arrays formed on highly resistive substrates where in Fig. 7A it is disclosed an electrically insulating substrate 20, a plurality of light emitting diode mesas disposed generally parallel to one another on the substrate the mesas being isolated from one another, by dielectric layer 30, each mesa defined by a stack of layer including a first conductivity layer 22 disposed between the substrate 20 and the second conductivity type layer 24 and electrically conductivity connection material 34 disposed between the neighboring elongated light emitting diode mesas, the conductive material electrically connecting the

first conductivity type layer of one mesa B to the second conductivity layer of the neighboring mesa B along the long dimension of the neighboring mesas to series-interconnect the light emitting diode mesas.

Regarding Claim 2, mesa A has elongated electrode 32 and mesa B has elongated electrode 32.

Regarding Claim 4 and 5, conductive material forms a substantially continuous electrical connection of the neighboring mesas A and B.

Regarding Claim 11, elements 32 in Fig. 7A are p and n-type electrodes and upper electrode layer 32 has a bigger geometry than the lower electrodes.

Regarding Claims 22-25, connection element 34 in Fig. 7A form an electrical series interconnection carrying electrical current flow between the neighboring mesas in the electrical current flow direction.
